INSTITUTE VISION AND MISSION

VISION:

"To achieve a prominent position among the top technical institutions"

MISSION:

- To bestow standard technical education par excellence through state of the art infrastructure, competent faculty and high ethical standards.
- To nurture research and entrepreneurial skills among students in cutting-edge technologies.
- To provide education for developing high-quality professionals to transform the society.

DEPARTMENT VISION AND MISSION

VISION:

To emerge as a renowned department for high quality teaching, learning and research in the domain of Electrical and Electronics Engineering producing professional engineers, to meet the challenges of society.

MISSION:

M1: To establish the infrastructure resources for imparting quality technical education in Electrical and Electronics Engineering.

M2: To achieve excellence in teaching, learning, research and development.

M3: To impart the latest skills and developments through practical approach along with moral and ethical values.

PROGRAM SPECIFIC OUTCOMES (PSOs):

Students will have the ability to

PSO1: Apply the logical, analytical and technical skills to model and build electrical systems and appliances as per societal requirements.

PSO2: Apply the advanced and fundamentals Electrical and allied Engineering knowledge in the design and development of hardware and software tools for non-conventional electrical power generation and distribution.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs):

Our graduates shall:

PEO1: Have strong foundation in Electrical and Electronics Engineering to excel in professional career, in higher studies or research.

PEO2: Analyze, design and develop various interdisciplinary projects and products, to contribute industrial needs and societal development.

PEO3: Have professional ethics and effective communication skills with life-long learning attitudes.

PROGRAM OUTCOMEs (POs):

Engineering students will be able to:

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.

PO6: The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and inmultidisciplinaryenvironments

COURSE OUTCOMES (COs):

COURSE OUTCOMES	KL	DESCRIPTION
C218.1	K1 & K2	Create user personas and empathy maps to empathize with users for understanding their needs and able to frame the problem statement with well-defined scope and boundaries.
C218.2	K1 & K3	Demonstrate skills to visualize solutions and translate ideas into tangible concepts.
C218.3	K1 & K3	Explore a wide range of solutions through divergent and convergent thinking and to organize and synthesize insights gathered from exploration activities.
C218.4	K1 & K2	Experiment rapid prototyping techniques to quickly iterate and refine concepts based on user feedback and to identify market opportunities and assess external factors influencing the commercialization potential of the solution.
C218.5	K3 & K5	Create a business model canvas chart to articulate key aspects of the business model and to prepare documentation for Patent/IPR filing.

COURSE OUTCOMES VS PROGRAM OUTCOMES MAPPING (DETAILED; HIGH: 3; MEDIUM: 2; LOW: 1):

COURSE OUTCOMES	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
C218.1	3	3	2	2	0	1	1	2	2	2	1	1	2	1

ACKNOWLEDGEMENT

We thank the Almighty God, for showing abundance of grace, without his blessings it would not have been possible for us to complete our project.

At this pleasing moment of having successfully completed our project, we wish to convey our sincere thanks and gratitude to our beloved kind Chairman **Dr. K. RAMAKRISHNAN**, who provided all the facilities to us.

Our sincere gratitude to **Dr. S. KUPPUSAMY**, Executive Director for his constant encouragement. We are also grateful to our Principal **Dr. D. SRINIVASAN**, for his constructive suggestions and encouragement during our project.

We wish to express the profound thanks to **Dr. G. GABRIEL SANTHOSH KUMAR**, Assistant Professor and Head, Department of Electrical & Electronics Engineering, for providing all necessary facilities for doing this project.

We whole heartedly acknowledge our deep sense of gratitude and indebtedness to our beloved guide **Mr. VIGNESHWARAN. P,** Assistant Professor, Department of Electrical &Electronics Engineering, for <<his/her>> expert guidance and encouragement throughout the duration of the project.

We extend our gratitude to all teaching and non-teaching members of Department of Electrical and ElectronicsEngineering, **K.Ramakrishnan College o f Engineering** for their kind help and valuable support to complete the project successfully.We would like to thank our parents and friends for encouragement.

ABSTRACT

The **Work Finder** project is a web-based platform designed to connect local workers with customers who need services quickly and efficiently. In many areas, skilled workers such as electricians, plumbers, carpenters, cleaners, and technicians find it difficult to reach customers, while customers struggle to find reliable workers nearby. This platform aims to solve that problem by providing a centralized digital system where service providers and customers can interact easily.

The system allows workers to create profiles, list their skills, availability, and service charges. Customers can register on the platform, search for workers based on service category and location, view worker profiles, and book services directly through the website.

The platform also includes features such as login authentication for customers and service providers, service requests, booking management, and feedback or rating systems to improve trust and service quality.

The Work Finder website is developed using modern web technologies and a database system to store user information, service details, and booking records. The platform focuses on a simple and user-friendly interface to ensure accessibility for both workers and customers. By digitizing the process of finding local workers, the system helps increase job opportunities for workers and saves time for customers.

Overall, the Work Finder project aims to create an efficient, reliable, and scalable online service marketplace that bridges the gap between service providers and customers, improving convenience, employment opportunities, and service accessibility in local communities.

RELEVANCE TO SUSTAINABLE DEVELOPMENT GOALS (SDGs)

PROJECT TITLE	SDGs ADDRESSED
WORK FINDER WEBSITE	SDG 1: No Poverty
	SDG8:DecentWorkandEconomic Growth
	SDG 9: Industry, Innovation and Infrastructure
	SDG 10: Reduced Inequality
	SDG 11: Sustainable Cities and Communities

SDG 1: No Poverty

- Provides income-generating opportunities for unemployed and underemployed individuals.
- Improves financial stability for local workers and their families.

SDG 8: Decent Work and Economic Growth

- Promotes productive employment opportunities for local workers.
- Helps skilled and unskilled workers access job opportunities.
- Encourages entrepreneurship and self-employment.

- Supports inclusive and sustainable economic growth at the community level.

SDG 9: Industry, Innovation and Infrastructure

- Utilizes digital technology to improve employment accessibility.
- Promotes innovation in local service delivery.
- Builds a scalable digital infrastructure for workforce connectivity

SDG 10: Reduced Inequalities

- Creates equal employment opportunities regardless of educational background or social status.
- Bridges the gap between job seekers and customers.
- Supports marginalized and informal sector workers.

SDG 11: Sustainable Cities and Communities

- Strengthens local economies by promoting neighborhood-based services.
- Encourages community engagement and resource sharing.
- Improves accessibility to essential services within local communities.

CHAPTER 1

INTRODUCTION

1.1 Background

Problem Domain

In many local communities, people often face difficulty in finding reliable workers such as electricians, plumbers, carpenters, cleaners, and technicians when they need them. At the same time, many skilled workers struggle to find regular job opportunities because they lack proper platforms to advertise their services. Most of the time, workers depend on word-of-mouth communication or local contacts, which limits their job opportunities and visibility.

Importance of Solving the Problem

- Helps increase employment opportunities for local skilled and unskilled workers.
- Saves time and effort for customers when searching for services.
- Creates a trustworthy platform through worker profiles, reviews, and ratings.
- Promotes digital accessibility for local service markets.
- Supports economic growth within local communities.

1.2 Objective

- Develop a web-based platform called Work Finder to connect workers and customers.
- Allow workers to register, create profiles, and list their services.
- Enable customers to search and hire workers based on service category and location.
- Provide a simple, user-friendly interface for booking services. Improve service accessibility and job opportunities using digital technology.

CHAPTER 2

USER RESEARCH

2.1 User Personas

Person 1: Elderly User

- Name: Kumar
- Age: 52
- Occupation: electrician

Goals:

- Find skilled and reliable workers quickly.
- Compare different service providers before hiring.
- Book services easily through the Work Finder website

Needs:

- A simple and user-friendly platform to search for workers.
- Detailed worker profiles with ratings and reviews.
- Easy booking and communication with service providers.

Person 2:

- Name: suresh
- Age: 47
- Occupation: plumber

Goals:

- Get more job opportunities from local customers.
- Promote skills and services through an online platform.
- Increase income and build a strong reputation.

Frustrations:

- Limited visibility to potential customers.

- Irregular job opportunities and unstable income.
- Lack of a platform to showcase skills and experience.

Needs:

- Ability to create and manage a professional worker profile.
- Receive notifications for new service requests.
- Build trust through ratings and customer feedback.

2.2 Empathy Map

Thinks

- "How can I promote my skills?"
- "I want regular work to earn a stable income."

Feels

- Worried about not getting enough jobs.
- Motivated to build a good reputation.

Says

- "I am a skilled worker looking for work."
- **"**I will provide good quality service."

Does

- Registers on the Work Finder platform.
- Creates a profile with skills and service details.
- Accepts service requests from customers.

Fig 2.1 Empathy Map

CHAPTER 3
PROBLEM STATEMENT

3.1 Problem Statement

In many communities, customers face difficulty in finding reliable and skilled workers such as electricians, plumbers, carpenters, and technicians when services are required. The traditional method of finding workers mainly depends on personal contacts, local references, or manual searching, which is often time-consuming and unreliable. At the same time, many skilled workers struggle to reach potential customers due to the absence of an effective platform to promote their services.

3.2 Root Cause Analysis

5W & 1H

- **What:** Difficulty in connecting customers with reliable local workers through a centralized platform.
- **Why:** Lack of a digital system where workers can promote their services and customers can easily find them.
- **Who:** Local service providers (workers) and customers who require services.
- **Where:** In local communities and small areas where organized service platforms are limited.
- **When:** Whenever customers need urgent services and workers need job opportunities.
- **How:** By developing the **Work Finder** web-based platform that connects workers and customers through online service listings and booking features.

Brainstorming Ideas

- Worker and customer registration system
- Separate login for customers and service providers
- Worker profile creation with skills and services
- Search and filter workers by service and location
- Service booking system
- Ratings and reviews for workers
- Notification system for service requests
- User-friendly website interface

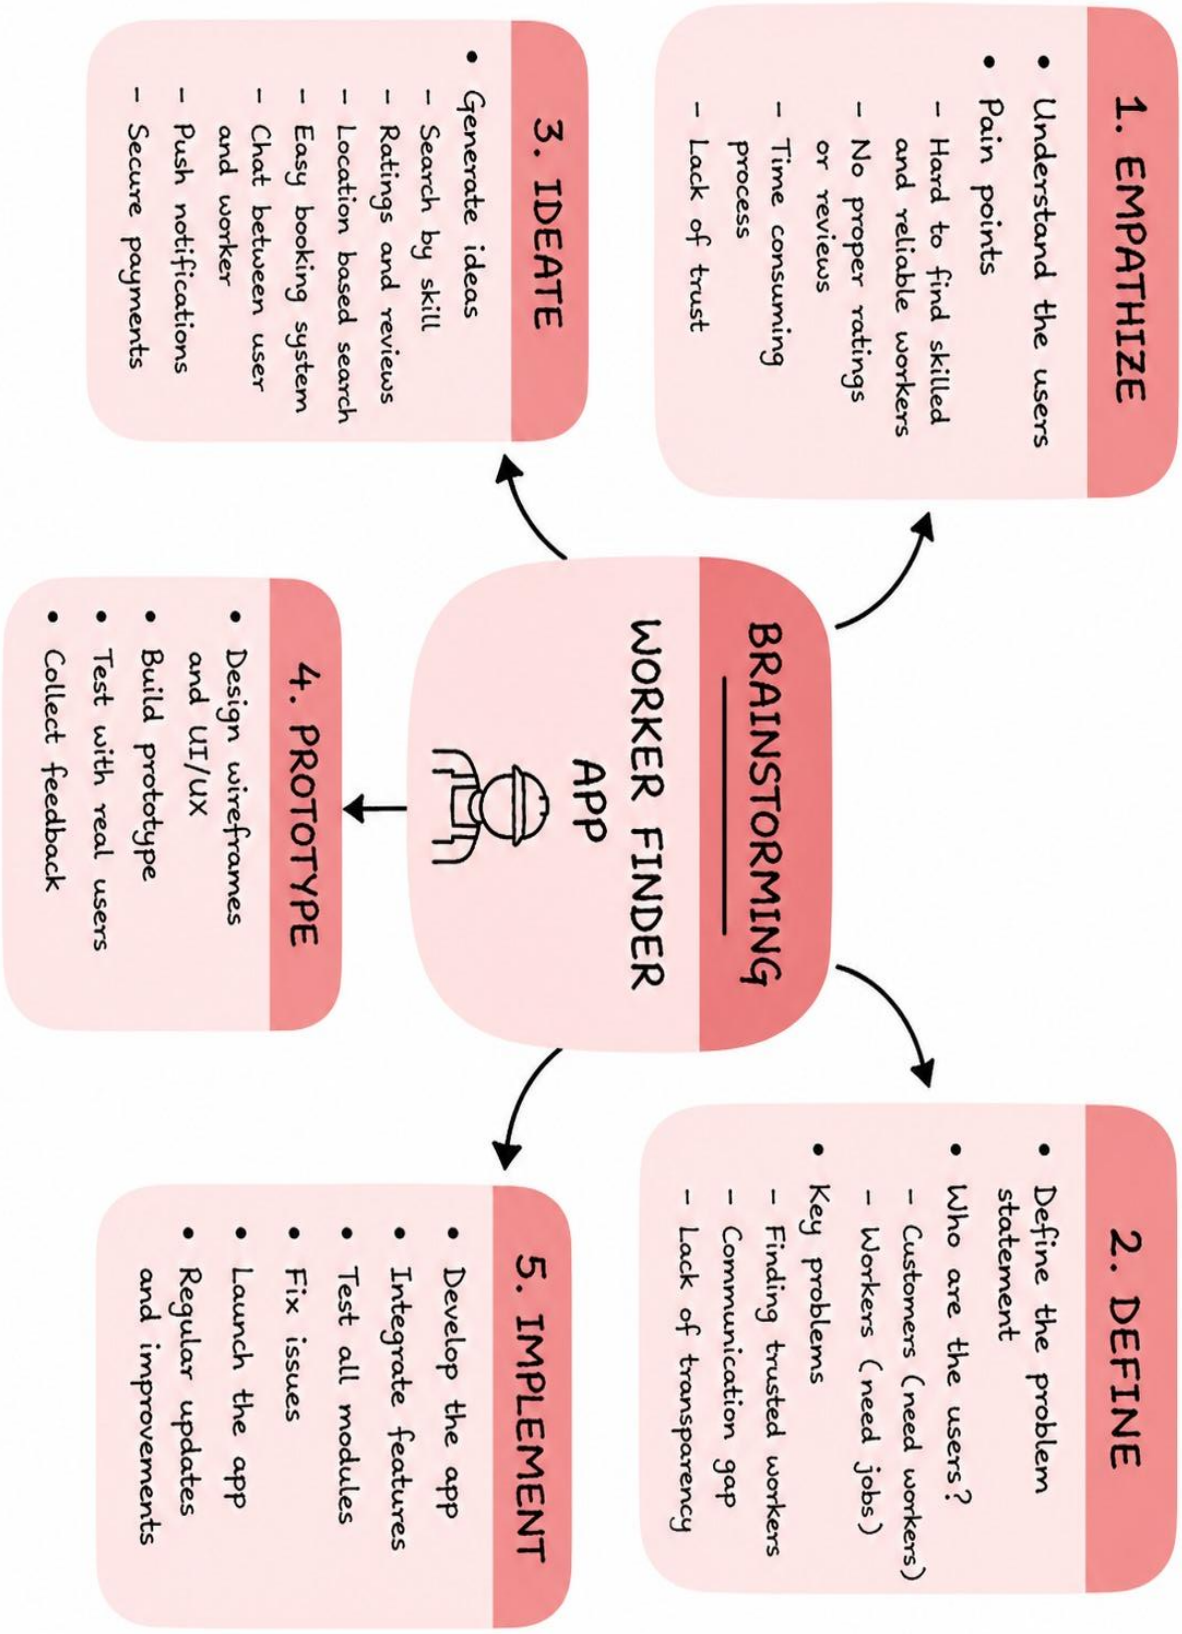

Fig 3.1 Brainstorming Tool

Mind Mapping (Concept Overview)

1. Users

- Customers (Service Seekers)
- Service Providers (Workers)
- Admin (System Manager)

2. Core Features

- User Registration and Login
- Worker Profile Creation
- Service Search and Filter
- Service Booking System

3. Platform Functions

- Ratings and Reviews
- Notifications for Service Requests

OIOR (Observe–Identify–Ideate–Refine)

Observe

- Study how customers currently find local workers.
- Observe the challenges faced by workers in getting jobs.

Identify

- Identify the gap between customers and local service providers.
- Recognize problems such as lack of reliable worker information.

Ideate

- Generate ideas to build the Work Finder website.
- Think of features like worker profiles, service search, and booking systems.

Fig 3.2 Mind Mapping Tool

CHAPTER 4

TESTING & ITERATION

4.1 Prototype Development

- Develop a basic working model of the Work Finder website.
- Design user interface pages such as registration, login, and dashboard.
- Create worker profile page to display skills and services.
- Implement service search and booking interface for customers.
- Test the navigation and usability of the website.
- Collect user feedback to improve the final system design

4.2Testing Method

- Functional Testing: Verify that all features such as registration, login, worker profile creation, and service booking work correctly.
- Usability Testing: Check whether the website interface is simple, clear, and easy for users to navigate.
- Performance Testing: Evaluate the website speed and responsiveness when multiple users access the system.
- Security Testing: Ensure user data and login information are protected.
- User Acceptance Testing (UAT): Collect feedback from users to confirm the system meets their requirements.

Feedback Collection Methods:

- User Surveys: Collect opinions from customers and workers about the website features and usability.
- Interviews: Conduct direct discussions with users to understand their experience and suggestions.
- User Testing: Observe how users interact with the platform and identify issues.
- Feedback Forms: Provide online forms for users to submit comments and suggestions.

4.3 Results & Improvements:

Results

- The prototype successfully connects customers and local workers through a web platform.
- Users can register, search for services, and book workers easily.
- The system improves accessibility and communication between service providers and customers.

Improvements

- Enhance the user interface design for better user experience.
- Improve the search and filtering system for faster worker discovery.
- Add advanced features such as notifications and secure authentication.

CHAPTER 5

BUSINESS MODEL CANVAS

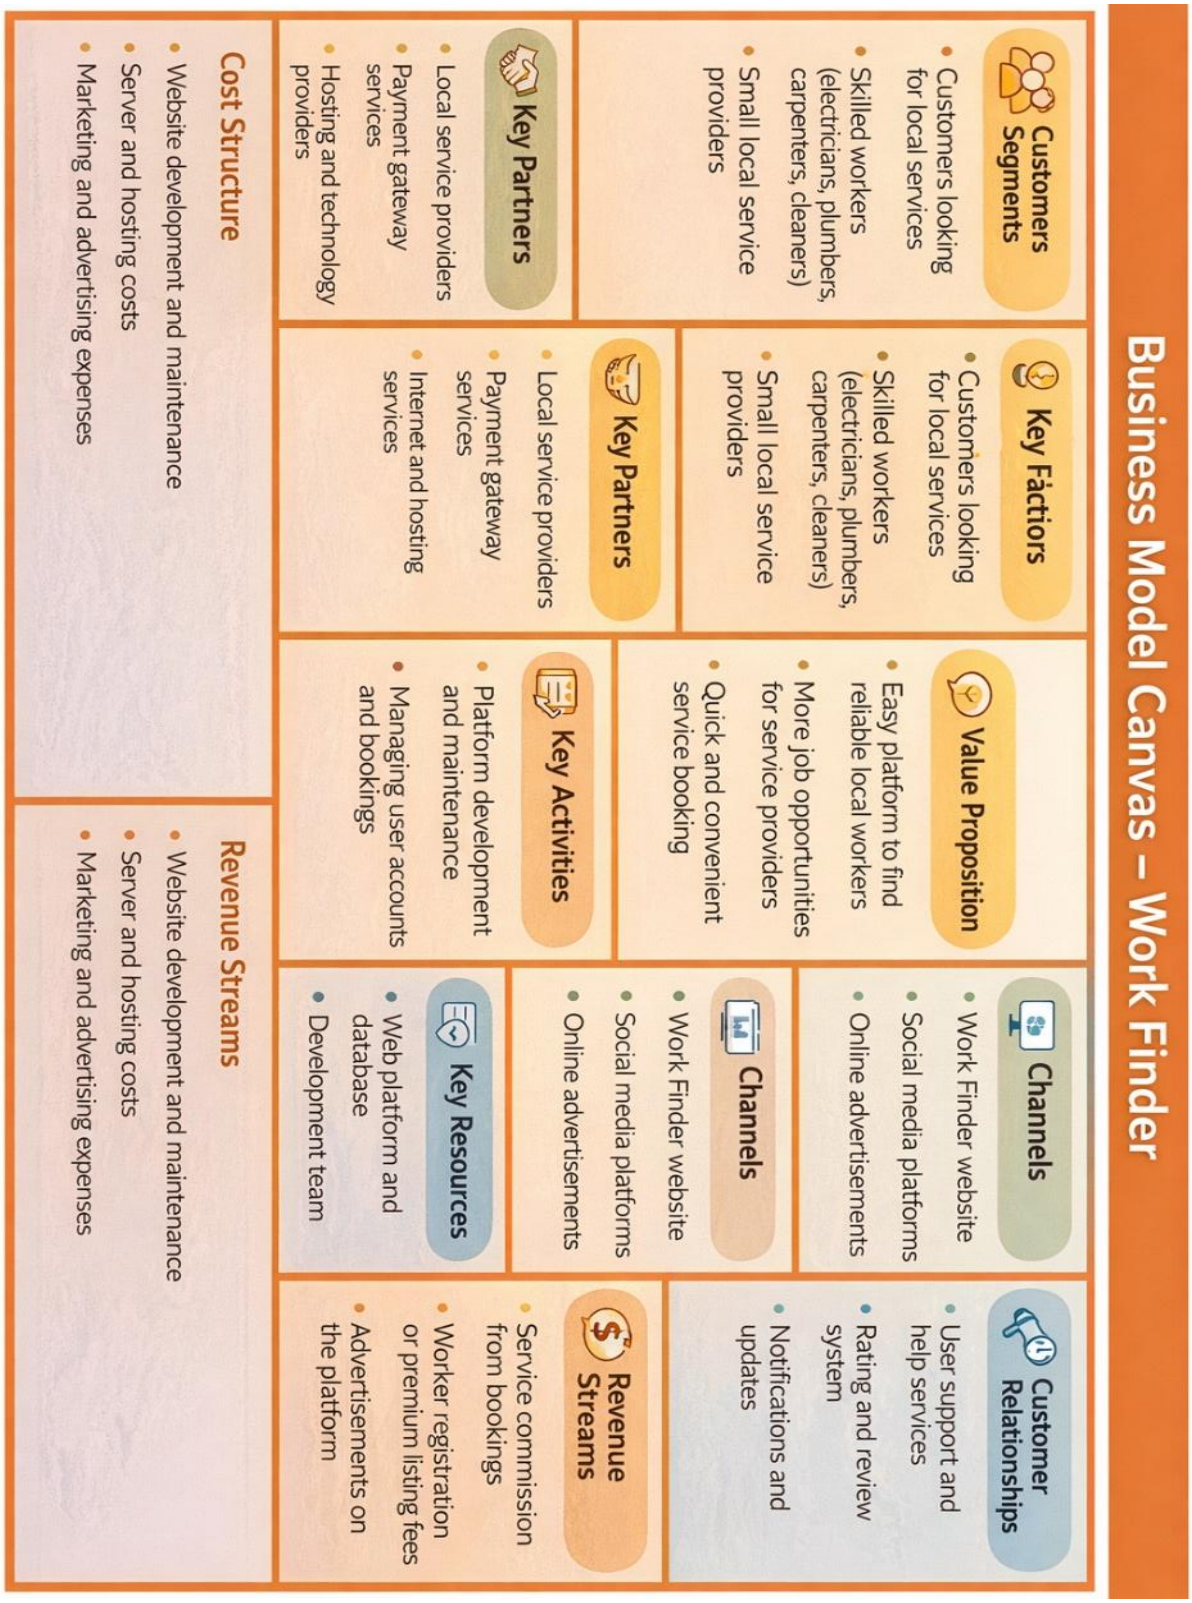

Fig 5.1 Business Model Canvas

Table 5.1 Key Partners & Proposition

Key Partners	Value Proposition
Local service providers	Easy platform to find reliable local workers
Payment gateway services	Quick and simple service booking
Hosting & cloud providers	Fast and accessible web platform
Technology partners	Secure and user-friendly system
Marketing partners	Better connection between workers and customers

Table 5.2 Segments & Streams

Customer Segments	Revenue Streams
Customers looking for local services	Service commission from bookings
Skilled workers (electricians, plumbers, carpenters, cleaners)	Worker registration fees
Small local service providers	Premium listing for workers
Households and small businesses	Advertisements on the platform
Local communities needing quick services	Partnership promotions

Table 5.3 Cost & Customer Relationship

Cost Structure	Customer Relationships
Website development and maintenance	User support and help services
Server and hosting costs	Rating and review system
Marketing and advertising expenses	Notifications and service updates
Platform maintenance and security	Easy communication between users
Technical support and updates	Trust building through feedback

CHAPTER 6
INFORMATION ARCHITECTURE

1. Structure of the Application (Work Finder Website)

The Work Finder application is designed using a modular and layered architecture so that each component handles a specific responsibility. This improves scalability, maintainability, and performance.

At a high level, the system is divided into three main layers:

1. Presentation Layer

This is the user interface where users interact with the application.

- Developed using technologies like HTML, CSS, JavaScript (or frameworks like React/Angular)
- Provides pages such as:
    - Home Page
    - Job Listings
    - User Dashboard
    - Brainstorming Tool Interface
    - Profile & Resume Section
- Responsible for:
    - Displaying job data and recommendations
    - Collecting user input (search, filters, ideas)
    - Visual tools like mind maps and brainstorming diagrams

2. Application Layer

This layer handles the core logic and processing of the system.

- Built using backend technologies like Node.js, Python (Django/Flask), or PHP
- Responsibilities include:
    - User authentication (login/register)
    - Job matching algorithms
    - Brainstorming tool logic (saving, editing ideas)
    - Resume parsing and analysis
    - Handling API requests between frontend and database

3. Data Layer

This layer stores and manages all application data.

- Databases like MySQL, MongoDB, or PostgreSQL
- Stores:
    - User profiles
    - Job postings
    - Saved jobs
    - Brainstorming ideas and mind maps
    - Application history
- Ensures data security, consistency, and fast retrieval

4. Additional Supporting Components

a) API Layer

- Connects frontend and backend
- Enables smooth data exchange (REST API)

b) Authentication & Security

- User login system
- Data encryption and secure sessions

c) Admin Module

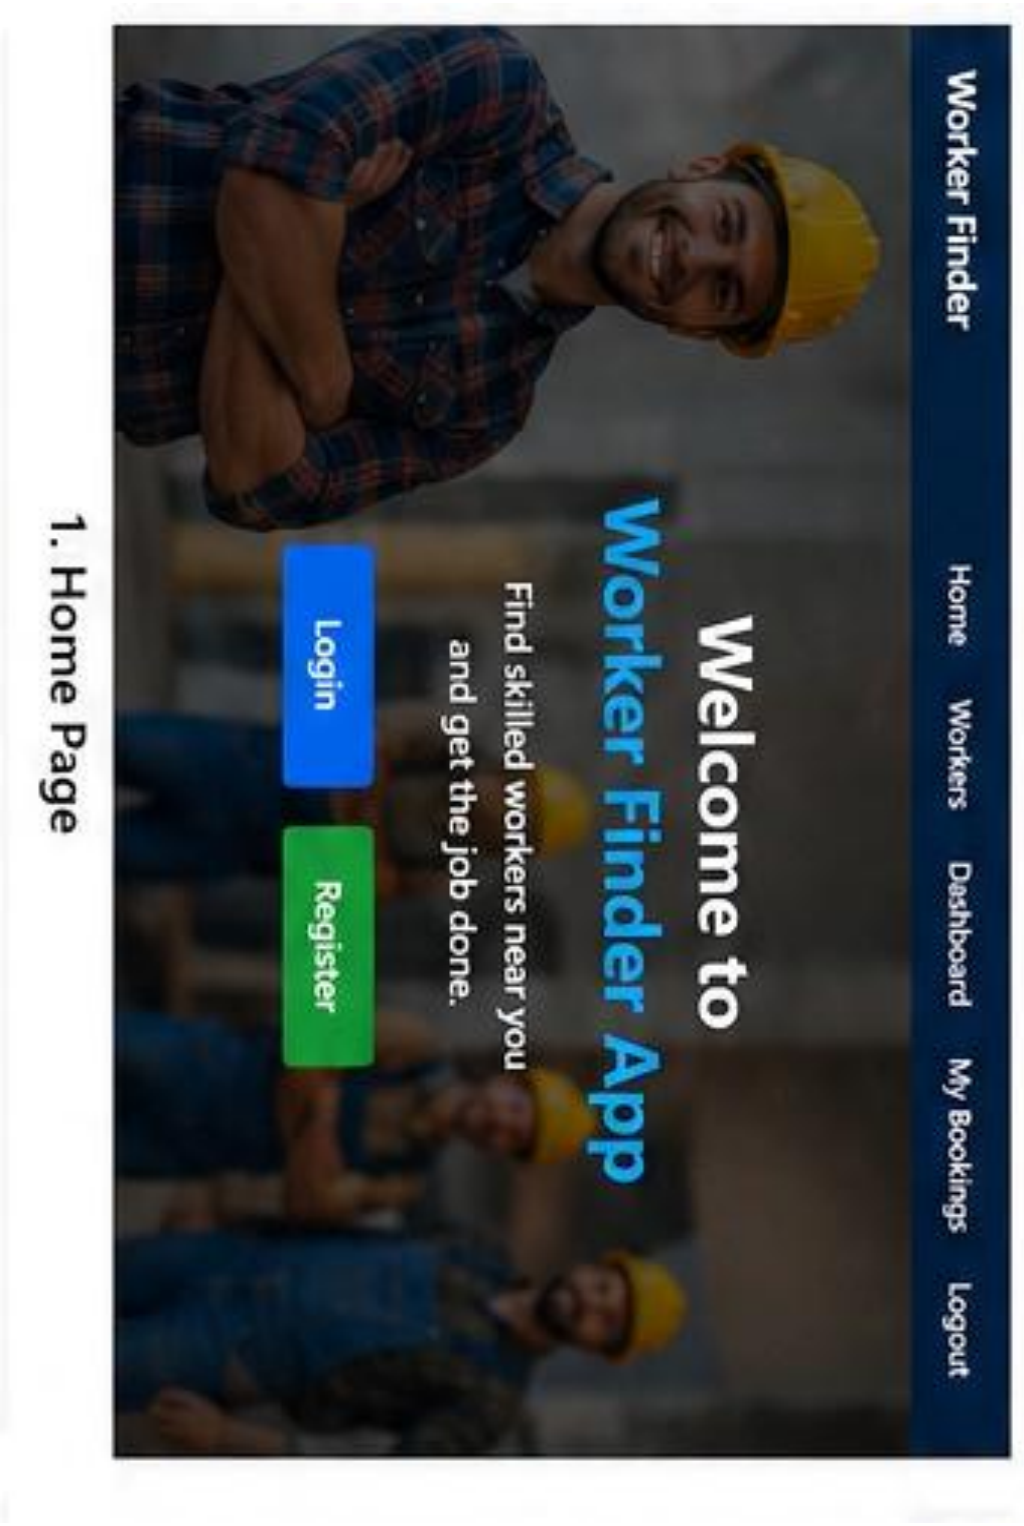

- Manage job postings
- Monitor users and system activity

5. Workflow of the Application

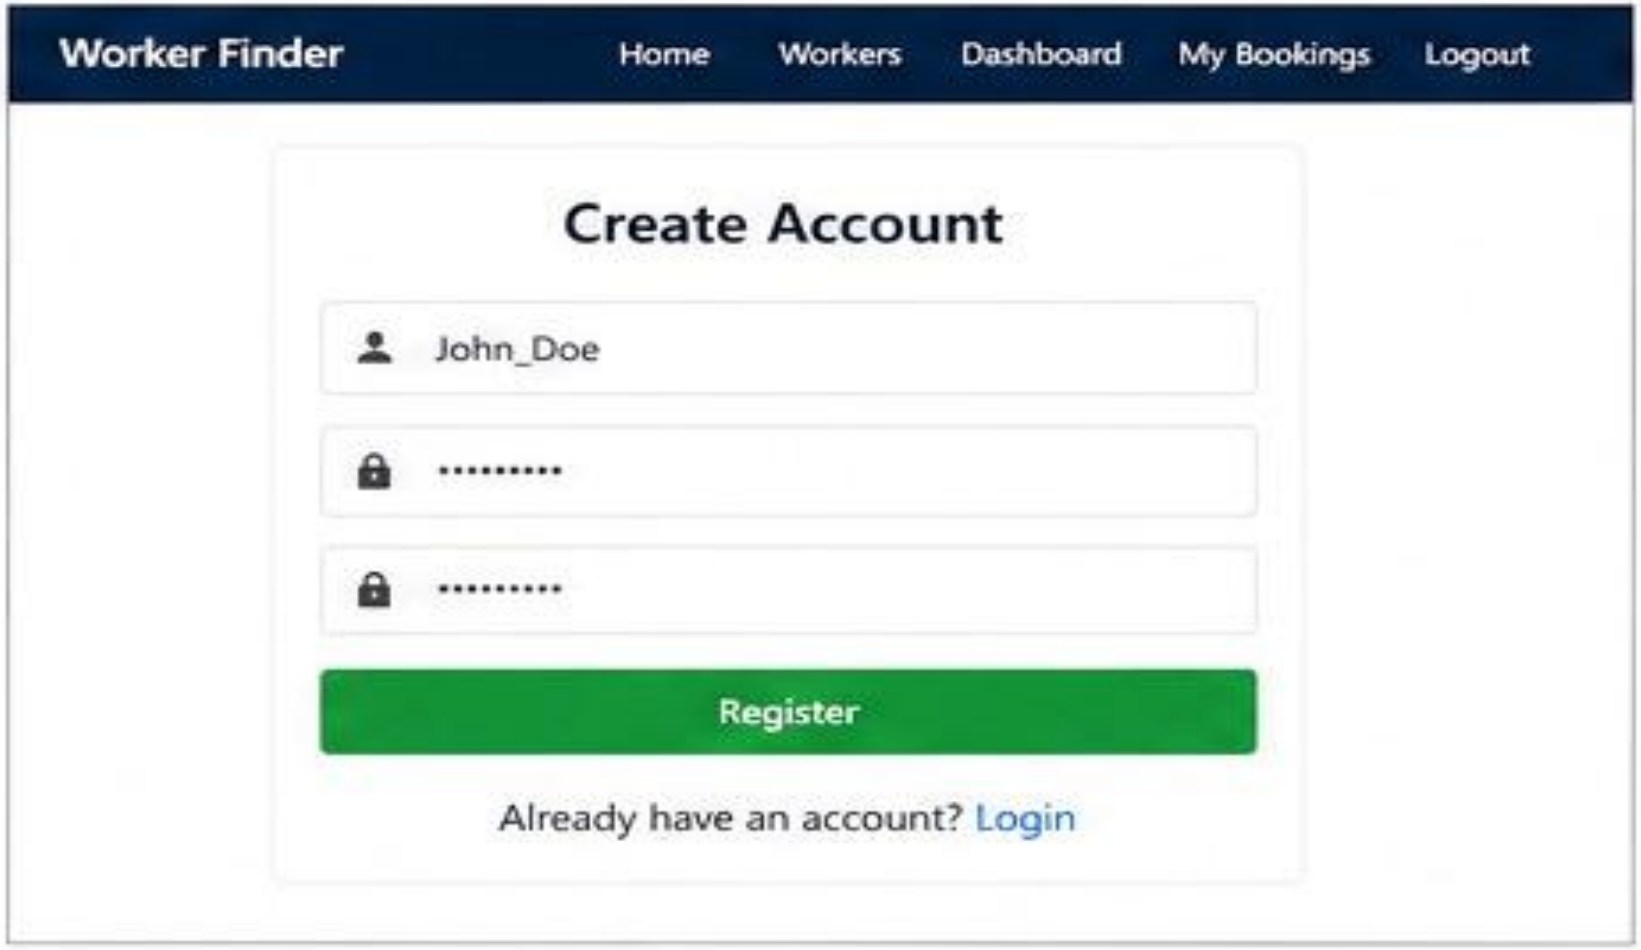

1. User registers/logs in
2. Creates profile and adds skills
3. Uses brainstorming tool to define career goals
4. Searches and applies for jobs
5. Tracks applications and receives recommendations

CONCLUSION

Conclusion:

The Work Finder website is a comprehensive and user-centered platform designed to simplify and enhance the job search process. It serves as an integrated solution for job seekers by combining job discovery, career planning, and professional development within a single application.

By incorporating features such as intelligent job search, personalized recommendations, resume support, application tracking, and an interactive brainstorming tool, the platform addresses the key challenges faced by modern job seekers. It not only helps users find suitable employment opportunities but also supports them in identifying career goals, improving their skills, and making informed decisions about their professional future.

The system is built on a well-structured architecture that ensures scalability, reliability, and ease of maintenance. Its carefully designed information architecture provides a seamless and intuitive user experience, enabling users to navigate the platform efficiently and access essential resources without confusion.

Overall, the Work Finder website goes beyond being just a job portal. It functions as a complete career development ecosystem that empowers users to plan, prepare, and progress in their professional journey. By bridging the gap between job seekers and employment opportunities, the platform contributes to more effective career management and improved employment outcomes
